EDUCATION

•Bachelor of Technology in Computer Science and Engineering

R.V.R. & J.C. College of Engineering

2023–2027

CGPA: 9.10

EXPERIENCE

•Summer Research Intern

National Institute of Technology Calicut (NITC)

May 2026 – July 2026

Calicut, India

- Developed an AI-powered system for automatic code smell detection and source code refactoring using Large Language Models.
- Created and curated a custom dataset containing code smells and corresponding refactored code examples for model training.
- Fine-tuned llm-based models to identify software quality issues and generate optimized refactored code.
- Improved software maintainability by automating code review and refactoring recommendations across multiple code smell categories.

PROJECTS

•AI-Powered Code Smell Detection and Automated Refactoring

Python, Transformers, LLM, NLP, Machine Learning, Fine-Tuning

- Developed an AI-powered system to detect software code smells and automatically generate refactored code.
- Created and annotated a custom dataset for code smell detection and code refactoring tasks.
- Fine-tuned transformer-based models on the custom dataset to improve prediction accuracy.
- Automated software maintenance by providing intelligent refactoring suggestions.

•AI-Powered Automatic RAG Builder

Python, FastAPI, LangChain, ChromaDB, FAISS, HuggingFace Embeddings, OpenAI, Gemini

- Developed an AI-powered system that automatically builds Retrieval-Augmented Generation (RAG) pipelines from natural language project descriptions.
- Implemented intelligent requirement analysis using rule-based logic to automatically select chunk size, chunk overlap, vector database, embedding model, retriever configuration, and citation support.
- Automated document ingestion for PDF, DOCX, and TXT files by generating embeddings, creating vector stores, and constructing LangChain RetrievalQA pipelines.
- Built a FastAPI-based REST API that enables users to query ingested documents and receive context-aware responses with optional source citations.
- Designed a modular architecture with separate components for requirement analysis, document ingestion, vector store creation, RAG pipeline generation, and API deployment for easy customization and local execution.

TECHNICAL SKILLS AND INTERESTS

Languages: Python, Java, C, SQL

AI Technologies: Machine Learning(ML), Deep Learning(DL), Convolutional Neural Networks(CNN), Recurrent Neural Networks(RNN), Encoders-Decoders, Transformers, Large Language Models (LLMs), Fine-Tuning, Retrieval Augmented Generation (RAG), AI Agents

Frameworks: LangChain, LangGraph, Flask

Databases: SQL, MongoDB

Tools: Git, GitHub, VS Code

Relevant Coursework: Data Structures and Algorithms, DBMS, Operating Systems, OOPs, Software Engineering

Areas of Interest: Artificial Intelligence, Machine Learning, Generative AI

Soft Skills: Problem Solving, Teamwork, Communication, Adaptability

ACHIEVEMENTS

- NIT Calicut Summer Internship**:Selected for AI & Software Engineering Internship *2026*
- LeetCode**:Solved 500+ Data Structures and Algorithms Problems *Ongoing*
- Odoo Hackathon**:Participated and built innovative software solutions *2025*
- Google Hackathon**:Participated in developing AI-based solutions *2025*
- College Technical Events**:Winner in multiple technical competitions *2023-2026*
- NPTEL Certifications**:3 NPTEL certifications(Python, IOT, DBMS) *2023-2026*
- Coursera Certifications**:3 Coursera certifications on Machine Learning *2023-2026*
- Udemy Certifications**:2 Udemy certifications on Java and AWS Cloud *2023-2026*
